Rudresh Oza Senior Software Engineer

Portfolio | ozarudresh18@gmail.com | +91-8560839021 | Linkedin | Jaipur, India | Github

PROFESSIONAL EXPERIENCE

Senior Software Engineer, *Celebal Technologies* 02/2026 | Jaipur,India
- Working on AI-based supply chain solutions using LangChain, LangGraph, and FastAPI.
- Building LLM workflows and APIs to automate supply chain processes.
- Designed and implemented a scalable AI-powered travel agent leveraging LangChain, LangGraph, Azure Cosmos DB, Azure AI Foundry, LangSmith, and Langfuse.

Software Engineer, *HornBlower Encore Studio* 05/2023 – 02/2026 | Jaipur, India
- Optimize the SDK by implementing caching to ensure a smoother and faster checkout process.
- Contributing to the Anchor, Operation & Reservation tech system.
- Developed transfer and split functionality for clients, improving user experience and enabling smooth transactions.
- Developed a scalable Travel AI Agent using LangChain, LangGraph, Azure Cosmos DB, Azure AI Foundry, LangSmith, and Langfuse.

Software Engineer, *RevDau Industries* 12/2022 – 05/2023 | Pune, India
- Full-stack developer for a telecommunication product, managing client communications and collaborating on diverse user stories.
- Coordinated and tracked tasks using JIRA to ensure seamless project management.

Full Stack Developer, *Celebal Technologies* 11/2020 – 12/2022 | Jaipur, India
- Collaborated with the development team and product manager to ideate and develop software solutions.
- Created a web application delivering real-time updates on nearby client sites, driven by user input.

Freelance, *Qualitech Chart & Craft* 04/2020 – 11/2020 | Jaipur, India
- Contributed as a front-end developer to the company website, ensuring a robust web presence.
- Designed and implemented a comprehensive admin dashboard, feedback collection form, and dynamic page management system.

PROJECTS

AI Agent Platform, *Music Industry*
- Developed backend APIs for an AI-powered music industry platform.
- Built agent workflows using LangChain and LangGraph.
- Integrated Azure AI Foundry models for intelligent responses.
- Used Azure Cosmos DB for conversations, agent state, and metadata.
- Integrated music-related internal and external APIs as agent tools.
- Implemented memory, checkpointing, and multi-step agent execution.
- Used LangSmith for tracing, debugging, and evaluation.
- Used Langfuse for prompt monitoring, cost tracking, and observability.
- Added structured outputs, retries, validation, and error handling.
- Optimized API performance, token usage, and response latency.

Supply Chain , *Supply Chain Digital Twin (SCDT)*
- Architected a FastAPI backend for a Supply Chain Digital Twin platform.
- Built an AI agent to recommend optimal supply chain routes.
- Built an asynchronous simulation engine for what-if analysis and KPI calculation.
- Developed cost models for freight, expedite penalties, SLA violations, and capacity utilization.
- Implemented application-level RBAC using SQLAlchemy and PostgreSQL.
- Integrated JWT authentication, refresh-token rotation, replay detection, and Azure AD SSO.
- Created REST APIs for networks, simulations, lead times, users, and permission-based navigation.
- Managed database migrations and schema versioning using Alembic.
- Applied clean architecture with modular routes, services, schemas, and models.

Anchor , *Operation & Reservation tech system*
- Spearheaded the development of a Gift Card and Passes redemption feature on a public web platform, driving customer engagement and generating over 1,500 new transactions within six months.
- Developed comprehensive transfer and split functionalities that enhanced user experience for over 2,000 clients; improved transaction speed by 40%, leading to higher customer satisfaction ratings across the platform.
- Developed a “Manage My Booking” feature for end customers, enhancing user experience on the public web platform.
- Integrated Algolia to enable efficient city search functionality across multiple locations.
- Optimized DynamoDB query performance, resulting in faster data retrieval and improved scalability.
- Integrated AWS SQS (Simple Queue Service) to improve system messaging reliability.
- Upgraded the Node.js environment from v14 to v20, boosting performance and security.

- Implement caching in the system to significantly speed up frontend loading times.

Telecommunication Web Application , *IZO-SDWAN*
- Implemented micro frontends to streamline development and administration tasks.
- Developed an interactive dashboard using Highcharts for enhanced data visualization.
- Built a personification feature to improve user customization.
- Introduced a dark mode feature for better user interface accessibility.

Cloud-Secured Managed Automated Reporting Tool
- Strengthened debugging capabilities through targeted training and hands-on experience, resulting in the resolution of 15 complex application issues within a single month to enhance overall system stability.
- Revamped the entire UI using Angular 12, enhancing performance through architectural improvements.
- Automated report generation and facilitated seamless uploads to Amazon S3.

SKILLS

JavaScript | Python/ FastAPI | LangChain/LangGraph | NextJS/ReactJS/React Native | Redux | Angular | TanStack Query | Material UI | HTML | CSS 3 | Tailwind CSS | ShadCN | TypeScript | GraphQL | NodeJS/ExpressJS | MongoDB/ArangoDB/DynamoDB | MySQL/PostgresSQL/Supabase | AWS | Lambda Functions | Cloud Watch | SES/SQS | Azure | DataDog | Algolia | Github/Gitlab | Elastic Search | Jira | RedShift | LangSmith/LangFuse | Vector Database (FIAS/BM25/Quadrant)

EDUCATION

Bachelor Of Technology (Computer Science), *Poornima Institute of engineering & technology* Jaipur, India
